Fractals | World of Mathematics Fractals and Dimensions. Fractals are some of the most beautiful and most bizarre geometric shapes. They look the same at various different scales – you can take a small extract of the shape and it looks the same as the entire shape. This curious property is called self-similarity. Fractal - Wikipedia A fractal in three-dimensional space is similar, however, a difference between fractals in two dimensions and three dimensions, is that a three dimensional fractal will increase in surface area, but never exceed a certain volume. What are Fractals? – Fractal Foundation A fractal is a never-ending pattern. Fractals are infinitely complex patterns that are self-similar across different scales. They are created by repeating a simple process over and over in an ongoing feedback loop. Driven by recursion, fractals are images of dynamic systems – the pictures of Chaos.

Fractals for Fun: Teaching Kids Patterns in Nature Fractals are patterns that repeat at different scales: If you zoom in on a picture of a fractal, you will still see the same pattern repeated. These patterns can be found in math equations, and they can also be found in the world all around us, from snowflakes to the leaves on trees. Fractal | Definition of Fractal by Merriam-Webster Fractals can be seen in snowflakes, in which the microscopic crystals that make up a flake look much like the flake itself. They can also be seen in tree bark and in broccoli buds. Coastlines often represent fractals as well, being highly uneven at both a large scale and a very small scale.
